

## Sports Turf Renovation

Mexteds offers an economical and environmentally-friendly top dressing option for sports turf upgrades.

### Topdressing

Our specialized equipment harvests and recycles surface topsoil. This leaves the turf intact, and avoids the need to import topsoil.

It is ideal for the renovation of playing surfaces that have become compacted or uneven, and is a cost-effective option, achieving multiple functions in a single pass.

Any stones are screened out of the topsoil before it is re-laid, creating a level, well-aerated surface and ideal conditions for re-grassing..

This method of topdressing can be used prior to re-sowing, undersowing, dimple seeding or broadcasting and is ideal for sports fields, race courses, golf courses and parks, as grass growth is not disturbed.

### Specifications:

GKB Eco-Dresser
